<b>L</b> #	3 Trask Lane   Danvers	Massachusetts   01923   USA	

For Research Use Only. Not for Use in Diagnostic Procedures.

Applications:ReactivityW, W-S, IPH	t <b>y: Sensitivity:</b> Endogenous	<b>MW (kDa):</b> 74	<b>Source/Isotype:</b> Rabbit IgG	UniProt ID: #P19525	Entrez-Gene Id 5610			
Product Usage Information	<b>Application</b> Western Blotting Simple Western™ Immunoprecipitation	1		<b>Dilution</b> 1:1000 1:10 - 1:50 1:50				
Storage	Supplied in 10 mM so 0.02% sodium azide.	Supplied in 10 mM sodium HEPES (pH 7.5), 150 mM NaCl, 100 μg/ml BSA, 50% glycerol and less than 0.02% sodium azide. Store at –20°C. Do not aliquot the antibody.						
Specificity/Sensitivity	PKR (D7F7) Rabbit mA	PKR (D7F7) Rabbit mAb recognizes endogenous levels of total PKR protein.						
Source / Purification	Monoclonal antibody residues surrounding	Monoclonal antibody is produced by immunizing animals with a synthetic peptide corresponding to residues surrounding Leu222 of human PKR protein.						
Background	Protein kinase R (PKR (dsRNA). PKR inhibits factor eIF2 (eIF2α) an and the Stats. In addi α, viral infection, and autophosphorylation at position 451 compl position 446 was part of neurodegenerative	Protein kinase R (PKR) is transcriptionally induced by interferon and activated by double-stranded RNA (dsRNA). PKR inhibits translation initiation through phosphorylation of the α subunit of the initiation factor eIF2 (eIF2α) and also controls the activation of several transcription factors, such as NF-κB, p53, and the Stats. In addition, PKR mediates apoptosis induced by many different stimuli, such as LPS, TNF- α, viral infection, and serum starvation (1,2). Activation of PK by dsRNA results in PKR dimerization and autophosphorylation of Thr446 and Thr451 in the activation loop. Substitution of threonine for alanine at position 451 completely inactivated PKR, while a mutant with a threonine to alanine substitution at position 446 was partially active (3). Research studies have implicated PKR activation in the pathologies of neurodegenerative diseases, including Alzheimer's disease (4,5).

Species Reactivity	Species reactivity is d	etermined by testin	g in at least one approve	ed application (e.g.,	western blot).			
Western Blot Buffer	IMPORTANT: For west TBS, 0.1% Tween® 20	IMPORTANT: For western blots, incubate membrane with diluted primary antibody in 5% w/v BSA, 1X TBS, 0.1% Tween® 20 at 4°C with gentle shaking, overnight.						
Applications Key	W: Western Blotting N	W: Western Blotting W-S: Simple Western™ IP: Immunoprecipitation						
Cross-Reactivity Key	H: Human
