#3675

Phospho-Myosin Light Chain 2 (Ser19) Mouse mAb

Orders:	877-616-CELL (2355) orders@cellsignal.com
Support:	877-678-TECH (8324)
Web:	info@cellsignal.com cellsignal.com

3 Trask Lane | Danvers | Massachusetts | 01923 | USA

For Research Use Only. Not for Use in Diagnostic Procedures.

Applications: W, W-S, IF-IC	Reactivity: H M R B Pg	Sensitivity: Endogenous	MW (kDa): 18	Source/Isotype: Mouse IgG1	UniProt ID: #P24844	Entrez-Gene Id: 10398		
Product Usage Information		Application Western Blotting Simple Western™ Immunofluorescence (Immunocytochemistry)			Dilution 1:1000 1:10 - 1:50 1:200 - 1:400			
Storage				um HEPES (pH 7.5), 150 mM NaCl, 100 µg/ml BSA, 50% glycerol and less than ore at –20°C. Do not aliquot the antibody.				
Specificity/Sensitivity		Phospho-Myosin Light Chain 2 (Ser19) Mouse mAb detects endogenous levels of myosin light chain 2 (smooth muscle) only when phosphorylated at serine 19. This antibody does not cross-react with the cardiac isoform of myosin light chain 2.						
Source / Purification		Monoclonal antibody is produced by immunizing animals with a synthetic phosphopeptide corresponding to residues surrounding Ser19 of human myosine light chain 2 (smooth muscle).						
Background		Myosin is composed of six polypeptide chains: two identical heavy chains and two pairs of light chains. Myosin light chain 2 (MLC2), also known as myosin regulatory light chain (MRLC), RLC, or LC20, has many isoforms depending on its distribution. In smooth muscle, MLC2 is phosphorylated at Thr18 and Ser19 by myosin light chain kinase (MLCK) in a Ca ²⁺ /calmodulin-dependent manner (1). This phosphorylation is correlated with myosin ATPase activity and smooth muscle contraction (2). ROCK also phosphorylates Ser19 of smooth muscle MLC2, which regulates the assembly of stress fibers (3). Phosphorylation of smooth muscle MLC2 at Ser1/Ser2 and Ser9 by PKC and cdc2 has been reported to inhibit myosin ATPase activity (4,5). Phosphorylation by cdc2 controls the timing of cytokinesis (5). Transgenic mice lacking phosphorylation sites on the cardiac muscle isoform show morphological and functional abnormalities (6).						
Background R	eferences	1. Ikebe, M. and Harts 2. Tan, J. L. et al. (1992 3. Totsukawa, G. et al. 4. Ikebe, M. et al. (200 5. Satterwhite, L. L. et 6. Sanbe, A. et al. (199	2) Annu. Rev. Bioche . Species Reacti	vity	Species reactivity is determined by testing in at least one approved application (e.g., western blot).						
Western Blot E	Buffer	IMPORTANT: For western blots, incubate membrane with diluted primary antibody in 5% w/v nonfat dry milk, 1X TBS, 0.1% Tween® 20 at 4°C with gentle shaking, overnight.						
Applications K	ey	W: Western Blotting W-S: Simple Western™ IF-IC: Immunofluorescence (Immunocytochemistry)						
Cross-Reactivi	ty Key	H: Human M: Mouse R: Rat B: Bovine Pg: Pig
