Anti-rabbit IgG F(ab')₂ Fragment (Sepharose Bead Conjugate)

For Research Use Only. Not for Use in Diagnostic Procedures.

Applications:	Reactivity:	Sensitivity:	Source/Isotype:
IP	Rab	Endogenous	Goat
Product Usage Information	Add 10-20 µl of well-vortexed beads to 200 µl of cell lysate at 1 mg/ml in 1X Cell Lysis Buffer (10X) #9803. See protocol for more details.		
Storage	Supplied in 10 mM sodium HEPES (pH 7.5), 150 mM NaCl, 100 µg/ml BSA, 50% glycerol. Store at -20°C. Do not aliquot the antibodies.		
Specificity/Sensitivity	Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-goat serum, Rabbit IgG and Rabbit serum. No reaction was observed against anti-pepsin, anti-goat IgG F _c , or human or mouse serum proteins.		
Source / Purification	Anti-rabbit IgG F(ab') ₂ Fragment is produced by immunizing goats with rabbit IgG whole molecules. The Anti-rabbit IgG F(ab') ₂ Fragment is prepared from monospecific antiserum by immunoaffinity chromatography using Rabbit IgG coupled to agarose beads followed by solid phase adsorption to remove any unwanted reactivities, pepsin digestion, and chromatographic separation.		
Description	This Cell Signaling Technology antibody is immobilized via covalent binding of primary amino groups to N-hydroxysuccinimide (NHS)-activated Sepharose beads. Anti-rabbit IgG F(ab') ₂ Fragment (Sepharose Bead Conjugate) is useful for the immunoprecipitation of antibodies raised in rabbit.		
Background	Anti-rabbit IgG F(ab') ₂ Fragment (Sepharose Bead Conjugate) is ideal for immunoprecipitation. This secondary antibody will detect rabbit antibodies. Since this secondary antibody is made with F(ab') ₂ fragments, non-specific binding through F _c receptors present on cells will be eliminated.		
Species Reactivity	Species reactivity is determined by testing in at least one approved application (e.g., western blot).		
Applications Key	IP: Immunoprecipitation		
Cross-Reactivity Key	Rab: Rabbit
