For Research Use Only. Not for Use in Diagnostic Procedures.

Applications: IF-F, IF-IC	Reactivity: H M R	Sensitivity: Endogenous	Source/Isotype: Rabbit IgG	UniProt ID: #P02730	Entrez-Gene Id: 6521
-------------------------------------	-----------------------------	-----------------------------------	--------------------------------------	-------------------------------	--------------------------------

Product Usage Information	Application Immunofluorescence (Frozen) Immunofluorescence (Immunocytochemistry)	Dilution 1:200 1:200
Storage	Supplied in 10 mM sodium HEPES (pH 7.5), 150 mM NaCl, 100 µg/ml BSA, 50% glycerol and less than 0.02% sodium azide. Store at -20°C. Do not aliquot the antibody.	
Specificity/Sensitivity	AE1/SLC4A1 (D3X1R) Rabbit mAb (IF Formulated) recognizes endogenous levels of total AE1 protein.	
Source / Purification	Monoclonal antibody is produced by immunizing animals with a synthetic peptide corresponding to residues surrounding Ala176 of human AE1 protein.	
Background	Anion exchange protein 1 (AE1), also named solute carrier family 4 member 1 (SLC4A1), is an anion transporter that mediates chloride-bicarbonate exchange in the kidney and regulates normal acidification of the urine (1,2). A different isoform of AE1 is a major integral membrane structure protein of erythrocytes, where it plays a critical role in the removal of carbon dioxide from tissues (3). In addition, AE1 is required for normal flexibility and stability of the erythrocyte membrane. Mutations in <i>SLC4A1</i> can lead to hereditary spherocytosis, ovalocytosis, and distal renal tubular-acidosis (4-7). Other mutations that do not cause disease became novel blood group antigens, which are part of the Diego blood group system (8).

Species Reactivity	Species reactivity is determined by testing in at least one approved application (e.g., western blot).
Applications Key	IF-F: Immunofluorescence (Frozen) IF-IC: Immunofluorescence (Immunocytochemistry)
Cross-Reactivity Key	H: Human M: Mouse R: Rat
