Ribosomal Protein L26 Antibody

Background: Ribosomal protein L26 (RPL26) is a component of the 60S ribosomal subunit and is involved in translation (1,2). It was shown that RPL26 increases the translation of p53 mRNA by binding to its 5’ untranslated region (UTR) after DNA damage. Studies found that overexpression of RPL26 enhances the binding of p53 mRNA to the ribosomes and increases p53 translation. Overexpression of RPL26 also induces cell-cycle arrest at G1 phase and increases radiation-stimulated apoptosis (2).

Specificity/Sensitivity: Ribosomal Protein L26 Antibody detects endogenous levels of total ribosomal protein L26.

Source/Purification: Polyclonal antibodies are produced by immunizing animals with a synthetic peptide corresponding to the sequence of human ribosomal protein L26. Antibodies are purified by protein A and peptide affinity chromatography.

Storage: Supplied in 10 mM sodium HEPES (pH 7.5), 150 mM NaCl, 100 µg/ml BSA and 50% glycerol. Store at –20°C.

Do not aliquot the antibody.

*Species cross-reactivity is determined by western blot.

**Anti-rabbit secondary antibodies must be used to detect this antibody.

Recommended Antibody Dilutions:
Western blotting 1:1000

For application specific protocols please see the web page for this product at www.cellsignal.com.

Please visit www.cellsignal.com for a complete listing of recommended companion products.

IMPORTANT: For western blots, incubate membrane with diluted antibody in 5% w/v BSA, 1X TBS, 0.1% Tween-20 at 4°C with gentle shaking, overnight.
