

| Applications: W | Reactivity: H M R | Sensitivity: Endogenous | MW (kDa): 40 | Source/Isotype: Rabbit | UniProt ID: #P09471 | Entrez-Gene Id: 2775 |
|------------------------------|-----------------------------|---|--|---|--|---|
| Product Usage Information | | Application Western Blotting | | | Dilution 1:1000 | |
| Storage | | Supplied in 10 mM sodium HEPES (pH 7.5), 150 mM NaCl, 100 μg/ml BSA and 50% glycerol. Store at – 20°C. Do not aliquot the antibody. | | | | |
| Specificity/Sensitivity | | Gα(o) Antibody detects endogenous levels of total Gα(o) protein. | | | | |
| Source / Purification | | Polyclonal antibodies are produced by immunizing animals with a synthetic peptide corresponding to residues surrounding Arg15 of human G α (o). Antibodies are purified by protein A and peptide affinity chromatography. | | | | |
| Background | | Heterotrimeric guanine nucleotide-binding proteins (G proteins) consist of α , β and γ subunits and mediate the effects of hormones, neurotransmitters, chemokines, and sensory stimuli. To date, over 20 known G α subunits have been classified into four families, G α (s), G α (i/o), G α (q) and G α (12), based on structural and functional similarities (1,2). Phosphorylation of Tyr356 of G α (q)/G α (11) is essential for activation of the G protein, since phenylalanine substitution for Tyr356 changes the interaction of G α with receptors and abolishes ligand-induced IP ₃ formation (3). G α (o) is the most abundant G protein in the brain and couples to serotonin, dopamine, GABA (B), opioid, glutamate and cholinergic receptors (4). G α (o) -/- mice have neurological defects such as tremors, seizures and poor motor coordination (5). | | | | |

| Species Reactivity | | Species reactivity is determined by testing in at least one approved application (e.g., western blot). | | | | |
| Western Blot Buffer | | IMPORTANT: For western blots, incubate membrane with diluted primary antibody in 5% w/v BSA, 1X TBS, 0.1% Tween® 20 at 4°C with gentle shaking, overnight. | | | | |
| Applications Key | | W: Western Blotting | | | | |
| Cross-Reactivity Key | | H: Human M: Mouse R: Rat | | | | |
