3 Trask Lane | Danvers | Massachusetts | 01923 | USA

For Research Use Only. Not for Use in Diagnostic Procedures.

Applications: IW, IF-IC, FC-FP	Reactivity: H M	Sensitivity: Endogenous	MW (kDa): 78-82	Source/Isotype: Rabbit IgG	UniProt ID: #O00429	Entrez-Gene Id 10059
VV, 1F-1C, FC-FF	I IVI	Lildogenous	76-62	Rabbit 190	#000429	10039
Product Usage Information		Application			Dilution	
		Western Blotting			1:1000	
		Immunofluorescence (Immunocytochemistry)			1:800 - 1:3200	
		Flow Cytometry (Fixed	d/Permeabilized)		1:80	0 - 1:3200
Storage		Supplied in 10 mM sodium HEPES (pH 7.5), 150 mM NaCl, 100 μg/ml BSA, 50% glycerol and less than 0.02% sodium azide. Store at –20°C. Do not aliquot the antibody.				
		For a carrier free (BSA and azide free) version of this product see product #63940.				
Specificity/Sensitivity		Phospho-DRP1 (Ser616) (D9A1) Rabbit mAb recognizes endogenous levels of DRP1 protein only when phosphorylated at Ser616.				
Species predicted based on 100% sec homology		Rat				
Source / Purification		Monoclonal antibody is produced by immunizing animals with a synthetic phosphopeptide corresponding to residues surrounding Ser616 of human DRP1 protein.				
Background	Dynamin-related protein 1 (DRP1) is a member of the dynamin superfamily of GTPases. Members this family have diverse cellular functions including vesicle scission, organelle fission, viral resistar and intracellular trafficking (reviewed in 1). DRP1 affects mitochondrial morphology and is important mitochondrial and peroxisomal fission in mammalian cells (2-5). The yeast ortholog of DRP1 clusted into a spiral-shaped structure on the mitochondrial membrane at the site of fission (reviewed in 6) this structure is likely conserved in mammalian cells (3). The division of the mitochondria, which is required for apoptosis, as well as normal cell growth and development is controlled, in part, by the phosphorylation of DRP1 at Ser616 by Cdk1/cyclin B and at Ser637 by protein kinase A (PKA) (reviein 6). When phosphorylated at Ser616, DRP1 stimulates mitochondrial fission during mitosis. Conversely, fission is inhibited when DRP1 is phosphorylated at Ser637 (reviewed in 6). Dephosphorylation at Ser637 by calcineurin reverses this inhibition (7). In addition to phosphorylation sumoylation of DRP1 is also an enhancer of mitochondrial fission (8). Balancing fission and fusion events is essential for proper mitochondrial function. Research studies have demonstrated mitochondrial defects in a variety of neurodegenerative diseases including Alzheimer's disease, Parkinson's disease, and Huntington's disease (reviewed in 6).					n, viral resistance, and is important ir of DRP1 clusters (reviewed in 6), and dria, which is in part, by the A (PKA) (reviewed mitosis. 6). 6) phosphorylation, on and fusion strated

Species Reactivity		Species reactivity is d	atarminad by tastin	g in at least one approve	ad application (s. c.	

Species Reactivity

Species reactivity is determined by testing in at least one approved application (e.g., western blot).

Western Blot Buffer

IMPORTANT: For western blots, incubate membrane with diluted primary antibody in 5% w/v BSA, 1X TBS, 0.1% Tween® 20 at 4°C with gentle shaking, overnight.

Applications Key

W: Western Blotting **IF-IC:** Immunofluorescence (Immunocytochemistry) **FC-FP:** Flow Cytometry (Fixed/Permeabilized)

Cross-Reactivity Key H: Human M: Mouse

Limited Uses

Except as otherwise expressly agreed in a writing signed by a legally authorized representative of CST, the following terms apply to Products provided by CST, its affiliates or its distributors. Any Customer's terms and conditions that are in addition to, or different from, those contained herein, unless separately accepted in writing by a legally authorized representative of CST, are rejected and are of no force or effect.

Products are labeled with For Research Use Only or a similar labeling statement and have not been approved, cleared, or licensed by the FDA or other regulatory foreign or domestic entity, for any purpose. Customer shall not use any Product for any diagnostic or therapeutic purpose, or otherwise in any manner that conflicts with its labeling statement. Products sold or licensed by CST are provided for Customer as the end-user and solely for research and development uses. Any use of Product for diagnostic, prophylactic or therapeutic purposes, or any purchase of Product for resale (alone or as a component) or other commercial purpose, requires a separate license from CST. Customer shall (a) not sell, license, loan, donate or otherwise transfer or make available any Product to any third party, whether alone or in combination with other materials, or use the Products to manufacture any commercial products, (b) not copy, modify, reverse engineer, decompile, disassemble or otherwise attempt to discover the underlying structure or technology of the Products, or use the Products for the purpose of developing any products or services that would compete with CST products or services, (c) not alter or remove from the Products any trademarks, trade names, logos, patent or copyright notices or markings, (d) use the Products solely in accordance with CST Product Terms of Sale and any applicable documentation, and (e) comply with any license, terms of service or similar agreement with respect to any third party products or services used by Customer in connection with the Products.
