Description: The kit provides a means of performing kinase activity assays with recombinant human VEGFR-3 kinase. It includes active VEGFR-3 kinase (supplied as a GST fusion protein), a biotinylated peptide substrate and a phospho-tyrosine antibody for detection of the phosphorylated form of the substrate peptide.

Peptide Core Sequence: MY*DKEY*Y*S

Molecular Weights: Peptide substrate, Biotin-MET (Tyr1253) peptide: 2,200 Daltons. GST-VEGFR-3 Kinase: 86 kDa.

Background: Vascular endothelial growth factor receptor 3 (VEGFR-3) is a 195 kDa membrane receptor tyrosine kinase. All of the VEGF receptors are characterized by seven extracellular immunoglobulin (Ig)-like domains followed by a membrane-spanning domain and a conserved intracellular tyrosine kinase domain (1). VEGFR-3 is largely restricted to the lymphatic endothelium in adult tissue and is thought to control lymphangiogenesis (1,2). Binding of VEGF-C/VEGF-D to VEGFR-3 results in transphosphorylation of tyrosine residues in its intracellular domain, recruitment of signaling molecules and activation of ERK1/2 and Akt signaling cascades (1,3).

Source/Purification: The GST-Kinase fusion protein was produced using a baculovirus expression system with a construct expressing a fragment of human VEGFR-3 (Asn799-Arg1298) (GenBank accession No. NM_002020) with an amino-terminal GST tag. The protein was purified by one-step affinity chromatography using glutathione-agarose.

Quality Control: The substrate peptide was selected using our Tyrosine Kinase Substrate Screening Kit #7450. Phospho-Tyrosine Mouse mAb (P-Tyr-100) #9411 was used for detection. The quality of the biotinylated peptide was evaluated by reverse-phase HPLC and by mass spectrometry.

Purified VEGFR-3 kinase was quality controlled for purity by SDS-PAGE followed by Coomassie stain and Western blot. The specific activity of the VEGFR-3 kinase was determined using a radiometric assay [Fig.1]. Time course [Fig.2], kinase dose dependency [Fig.3] and substrate dose-dependency [Fig.4] assays were performed to verify VEGFR-3 activity using the VEGFR-3 substrate peptide provided in this kit. VEGFR-3 sensitivity to the inhibitor staurosporine was measured using the VEGFR-3 substrate peptide provided in this kit [Fig.5].
